

TERPENE EDUCATION

IT'S NOT JUST ABOUT THC

TERPENES TELL THE REST OF THE STORY.

Terpenes are compounds found in cannabis that offer a unique scent and flavor but they are more than aroma — terpenes can influence the effects of cannabis, working together with cannabinoids like THC and CBD in what's known as the entourage effect. Whether you're seeking energy, relaxation, focus, or relief, terpenes play a key role in shaping your experience.

THE ENTOURAGE EFFECT

BETTER TOGETHER

Various compounds in cannabis may amplify each other's benefits and mitigate potential side effects, resulting in a more balanced and effective experience.

METHODS OF CONSUMPTION

VAPORIZATION

AVERAGE ONSET IMMEDIATE
DURATION 2-4 HOURS

Vaping uses a heat source to convert cannabis oil into vapor rather than smoke. The vapor is then inhaled and absorbed through the lungs. It is a cleaner, quickly dissipating and low-odor option compared to smoke-based delivery methods.

FAST-ACTING · HIGHLY EFFICIENT
PATIENT CONTROLLED DOSING
FULL-BODY EFFECTS · NO COMBUSTION
EASY-TO-USE

TRANSDERMAL PATCHES

AVERAGE ONSET 30 MINUTES-1 HOUR
DURATION 24 HOURS

Cannabinoids are delivered directly into the bloodstream in a sustained and lasting 24 hour dose.

DISCREET · FULL-BODY EFFECTS
LONG LASTING · CONTROLLED MICRODOSE

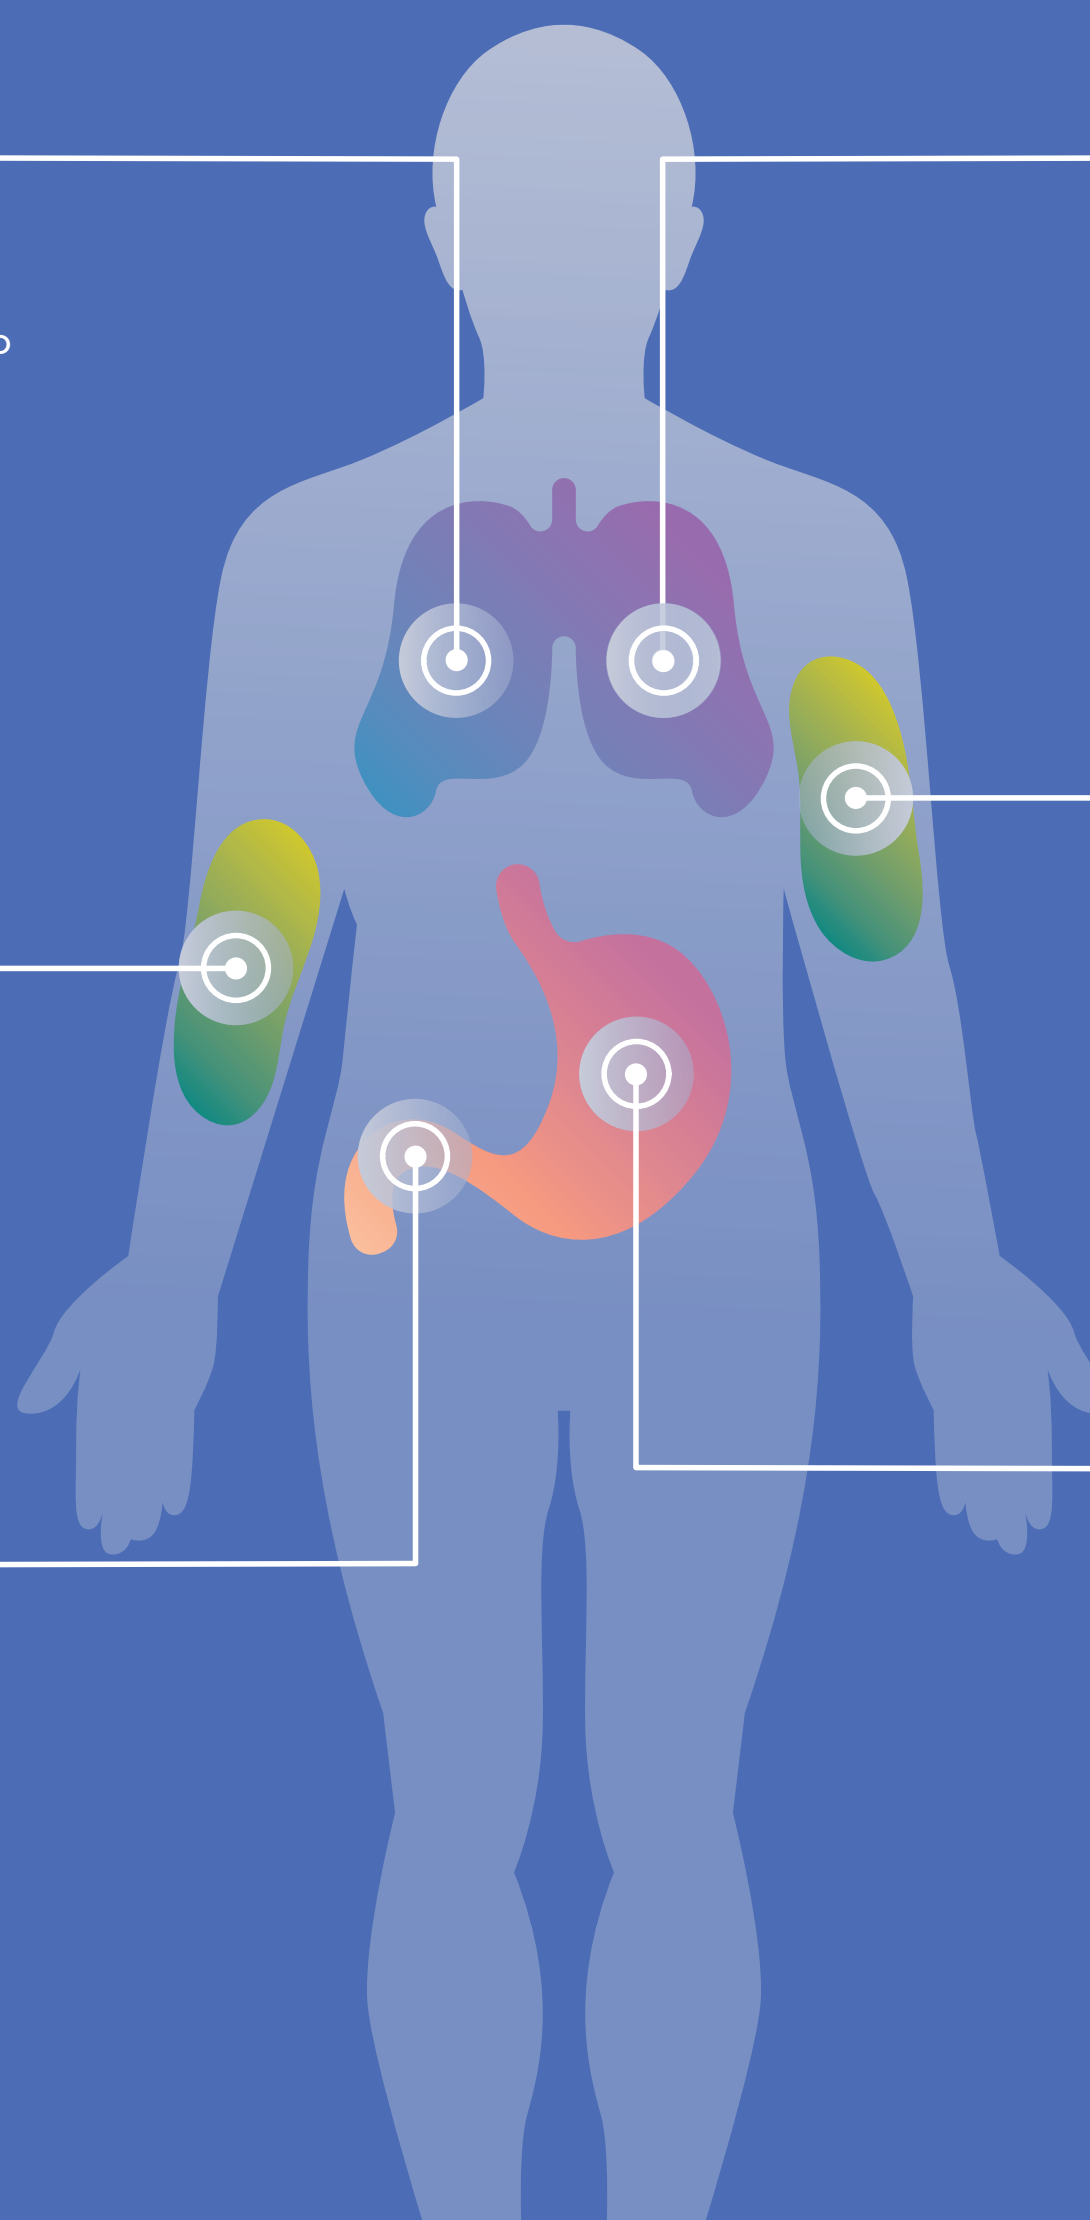

EDIBLES

AVERAGE ONSET 30 MINUTES-2 HOURS
DURATION 4-10 HOURS

Food products infused with cannabis that are consumed orally and absorbed within the stomach.

EASY-TO-USE · FAST-ACTING
ODOR-FREE · MEASURED MICRODOSING
FULL-BODY EFFECTS · DISCREET

SMOKING

AVERAGE ONSET IMMEDIATE
DURATION 1-3 HOURS

Flame to dried cannabis flower causing combustion into smoke. Smoke is then inhaled and absorbed through the lungs.

FAST-ACTING · EASY DOSING

TOPICAL CREAM

AVERAGE ONSET IMMEDIATE
DURATION 2-4 HOURS

Applied to affected area on skin and absorbed into the blood vessels.

LOCALIZED EFFECTS · DISCREET
NON-PSYCHOACTIVE

TINCTURES

AVERAGE ONSET 15-30 MINUTES
DURATION 4-6 HOURS

Sublingual delivery offers faster activation than most edibles, as initial onset comes from transmucosal absorption, followed by slower onset and metabolism in the GI tract.

EASY-TO-USE · FAST-ACTING · DISCREET
ODOR-FREE · MEASURED MICRODOSING
FULL-BODY EFFECTS
